Audio/slides at parleys

www.parleys.com

Themes

- JavaFX
- HTML5 & JavaScript (Project Avatar)
- Cloud & Multi-tenancy
- Changes to Java language for Java 8
- JVM for other languages too (invokedynamic)
- ME: Bridge the Java SE/Java ME divide
- Embedded SE

Best overview: second part of main session from Tuesday morning

Java 8

- Going to two year release cycle
- Jigsaw (modularity)
 - Coarse grain modularity baked in – not OSGi
 - Smaller footprint, faster startup
 - Support for native packages
 - New executable format, faster, can include native libraries
 - Dependency specs

Java 8

- Closures
 - Novel approach for Java: structural typing
 - Single abstract method – SAM
 - Will work with existing interfaces/classes
 - New parallel collections
 - Many cores is the driver for this feature
- Nashorn
 - Javascript running natively in the JVM
 - Replace Rhino

Java 9

- Mumble mumble, seemed very interesting...

JavaFX

- Release 2.0 at conference (Windows)
- Mac port coming soon
- Contains a webkit for displaying HTML
- Good tooling: NetBeans and visual builder
- FXML
- Open sourceing
- whispers of “deprecating” Swing

From javafx.com

6. Is JavaFX replacing Swing as the new client UI library for Java SE?

Yes and no. Swing will remain ... for the foreseeable future... Swing ... relies on an old architecture ... JavaFX features a set of modern UI controls ...we recommend developers to leverage JavaFX APIs as much as possible when building new applications...
